IN-PERSON TRAINING · 4TH EDITION

Aligners: what to do beyond the screen

3 days · 9 speakers · hands-on MARPE workshop

8 - 10 OCT 2026

MADRID · HOTEL MELIÁ INNSIDE VALDEBEBAS

WHY SAS MEETING IV

The success of aligner treatment **is not decided in front of the computer alone.**

What truly makes the difference happens in the clinic: stripping, selective grinding, bite ramps and the orthodontist's judgement. That is what you will learn here.

THE TRAINING

Everything that happens beyond the software

This training will teach you everything that happens beyond the software, in everyday clinical practice: from the precise execution of stripping, selective grinding and bite ramps, to the use of auxiliary techniques that enhance movement control and avoid unnecessary refinements.

You will learn to identify when the digital plan needs manual intervention, how to resolve real discrepancies between the simulation and the patient's mouth, and which clinical strategies allow you to achieve more predictable and stable results.

A programme designed by orthodontists experienced in complex aligner cases, so that you too can develop clinical judgement, confidence and full control over your treatments.
